News Briefs

The J. Elliott Royer Award is presented each year to the San Francisco or East Bay physician who has "made the most significant contribution to psychiatry and neurology in the preceding year." Leon J. Epstein of Sausalito, Professor and Vice-chairman of the Department of Psychiatry, School of Medicine and Associate Director of Langley Porter Neuropsychiatric Institute, was given the award at a luncheon, November 22, in the UCSF University House.

As a therapist and clinical researcher, Dr. Epstein has focused on three major areas: psychiatric care of the elderly, effects of psychoactive drugs, and aspects of death and chronic illness.

The Royer Award, which includes a cash grant of $15,000, comes from an endowment created by the late Dr. Royer, an Oakland neuropsychiatrist, who died in 1961. The UC Regents annually select the recipient on the recommendation of a committee composed of the Dean and two faculty members of the UCSF School of Medicine and the presidents of the San Francisco Medical Society and the Alameda-Contra Costa Medical Association.

Author of numerous articles on the psychiatry of aging and drugs prescribed for mental illness, and of films portraying interviews of chronically and terminally ill patients and their attending nurses and physicians, Dr. Epstein also has studied the possible relation between depression and cancer.

A pioneer in the use of lithium compounds to counteract severe mood disturbances, Dr. Epstein is co-author with Henry Lennard of the textbook *Drug Mystification* which portrays the social, psychological and neurological action of psychoactive drugs and their possible abuse. He is a member of the Council of the American College of Neuropsychopharmacology.

A new program has been introduced at SFGH Women's Health Center to help make childbirth a more satisfying experience for non-English speaking women. At the Women's Health Center, which is operated by the S.F. Department of Public Health and is under medical supervision of UCSF Ob/Gyn Service, approximately one-third of the pregnant women who register for care speak languages other than English, primarily Spanish, Chinese, Tagalog, or Korean. Many are newcomers to the U.S. Although some bilingual health workers are available to translate for them, now, with a grant from the S.F. Foundation, the Women's Health Center has been able to develop an even more personal approach to the problem. This involves recruiting and training bilingual volunteer "labor coaches," who can relate on a one-to-one basis to pregnant women throughout the course of pregnancy, labor and childbirth. For information call Judy Knoop, 565-8166. The Women's Health Center is located on the sixth floor of the new Outpatient Wing of the SFGH Medical Center.

Whether a brain-damaged patient in a coma will regain consciousness may be predictable using a new technique developed by a UCSF psychiatrist. Even those patients who appear to have the most severe brain damage due to head injuries (usually from motor accidents, stroke, or diseases of the central nervous system) may have a good chance of recovery if they show fairly normal brain wave responses, said Maurice Rappaport of LPNI.

The technique makes use of electroencephalography (EEG) to measure the brain's ability to respond to such stimuli as flashing lights and clicking noises, Dr. Rappaport said. He was reporting on a study that was conducted at the head injury unit of the Physical Medicine and Rehabilitation Department of the Santa Clara Valley Medical Center in San Jose, CA.

The information that is obtained by this "evoked potential (EP)" test has a possible role in predicting the patient's chance of recovery, and is a help to members of the family who may not otherwise know if the patient can see or hear, Dr. Rappaport said at the joint meeting of the American Academy of Physical Medicine and Rehabilitation and the American Congress of Rehabilitation Medicine in San Diego, November 11. Co-authors of the paper were Sheldon Berrol, Glenn Reynolds, Kenneth Hopkins, Caryl Hall, and Teodoro Belleza.

Julius R. Krevans, Dean, School of Medicine has been elected Chairman of the Council of Deans of the American Association of Medical Colleges. The election took place in San Francisco on Friday, Nov. 12 at the AAMC's annual meeting. The Council of Deans, which includes the deans of the 116 U.S. Medical Schools, is one of the three top governing councils of the AAMC, which represents in addition more than 400 teaching hospitals, 56 medical societies and all U.S. medical students.

Colleagues of Julius H. Comroe, Jr. at the Cardiovascular Research Institute will honor him at a three-day symposium on "Cardiorespiratory Function," Monday through Wednesday, Dec. 6-8. Dr. Comroe, an internationally known authority on cardiopulmonary physiology and function, developed the CVRI in 1957, remaining as director until 1974 when he resigned to devote full time to research, teaching and writing. He is Morris Herzstein Professor of Biology here at UCSF. The CVRI is considered one of the most outstanding centers in the U.S. for research related to heart disease, lung function, and blood circulation. The Institute has trained more than 500 young research fellows from all over the world. Dr. Comroe is a Fellow of the Royal College of Physicians and a member of the National Academy of Sciences. He has won the American Heart Association's highest award, the Gold Heart Award, and the American Lung Association's Trudeau Medal. He was a member of the President's Panel on Heart Diseases and a consultant to the National Advisory Heart and Lung Council of the National Institutes of Health.

SFGH Briefs

The Northern California Burn Council, which has its headquarters in the Burn Unit office at SFGH, is holding a benefit spaghetti dinner and square dance Friday, Dec. 3, in the Starr King Room, First Unitarian Church, Geary and Franklin Streets, at 7 p.m. Proceeds from the sale of 400 tickets will help to fund the Burn Council's production of a documentary film designed for viewing in schools and on television. Consultants for the film include Donald Trunkey, UCSF Associate Professor of Surgery and Chief, SFGH Burn Unit, chiefs of other Bay Area burn units, officers of the S.F. Fire Department, and former burn patients and their families. Tickets, at $10 per person, or $18 per couple, are available from Andrew McGuire, Executive Director of the Council, 585-8820.

THE SFGH Memorabilia Committee has raised over $9,000 of the $10,000 sought from alumni and friends to preserve and relocate architectural ornaments and other memorabilia from the old hospital buildings being demolished. Norman Sweet, Associate Professor of Medicine, is chairman. The committee has been successful in saving several outdoor lamp standards and brass lanterns; the large terra cotta medallion above the main entrance to the former Administration building; the chandelier, Siena marble arches and marble newell post from the former hospital lobby, a carved oak and marble fireplace, and other items. Tax deductible donations to the Memorabilia Fund may be addressed to the Dean's Office, Room 2A-21, SFGH Medical Center, 1001 Potrero Ave., S.F. 94110. Gifts of $50 or more will be acknowledged with the inscription of the donor's name on a permanent plaque.

Deadline for the next issue of Today/Tomorrow which will cover events from January 1-14 will be 11 a.m., Tuesday, Dec. 21. Send your copy to News Services Dept., 1475 4th Ave. Attn. Allen Balderson
